

Test Summary Report

Agile Travel Website - Manual Testing Project | Tester: Rehab Sabry | Browser: Google Chrome
Application: <https://travel.agileway.net>

Overall Execution Summary

	Count
Total Test Cases	41
Executed Test Cases	41
Passed Test Cases	15
Failed Test Cases	26
Blocked Test Cases	0
Pass Rate	36.6%
Fail Rate	63.4%

Results by Module

Module	Total	Passed	Failed
Select Flight	12	4	8
Passenger Details	16	9	7
Payment	13	2	11
Total	41	15	26

Defects by Severity

Severity	Defects
High	11
Medium	12
Low	3
Total	26

Defects by Priority

Priority	Defects
High	16
Medium	8
Low	2
Total	26

Key Findings

- **Payment** (11 of 13 test cases failed): payments were processed with an expired card date, an empty or invalid card number, and invalid card holder names. Repeated clicks on *Pay now* were not blocked.
- **Select Flight** (8 of 12 failed): the application accepted a return date before the departure date, a past departure date, identical origin and destination, and missing required fields.
- **Passenger Details** (7 of 16 failed): names with numbers, special characters, and over-length values were accepted, and the empty first name was not validated.
- Valid booking flows (one-way, return, same-day return) and valid Visa/MasterCard payments work as expected.

Conclusion and Recommendation

26 of 41 executed test cases failed (63.4%), mostly because input validation is missing. The application is not ready for release in its current state. It is recommended to fix the High-severity Payment and booking-rule defects first, then re-run the failed test cases to confirm the fixes.
